Automate the energy value chain – Where do we start?

Common processes across all areas

Environmental / Safety

- Tool Box meeting
- Incident report

- JSA / JHA
- Site audit / inspection

- Safety observations / Take 5
- Contractor audit

The massive problem

Companies spend millions on people & technology but still run processes on paper & excel

Data isn't captured or is compromised

Operational mistakes

Processes aren't integrated, workflows break down

Negative impact on productivity and safety

Legacy systems are clunky, slow and can be populated with poor data

Lack of executive insight and control over operations

Operators interact with an average of 17 different processes everyday

IT nightmare – The application gap

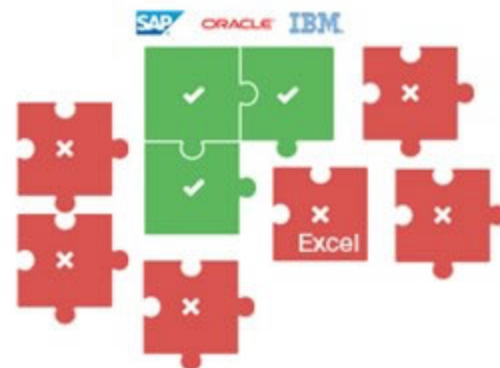

Expensive

Custom developed mobile applications are costly, slow and consume valuable IT resources

Poor adoption

Mobile applications don't always reflect the way employees work resulting in poor adoption rates

Unproductive & incomplete

Juggling multiple, niche applications that don't address company specific needs across all business processes

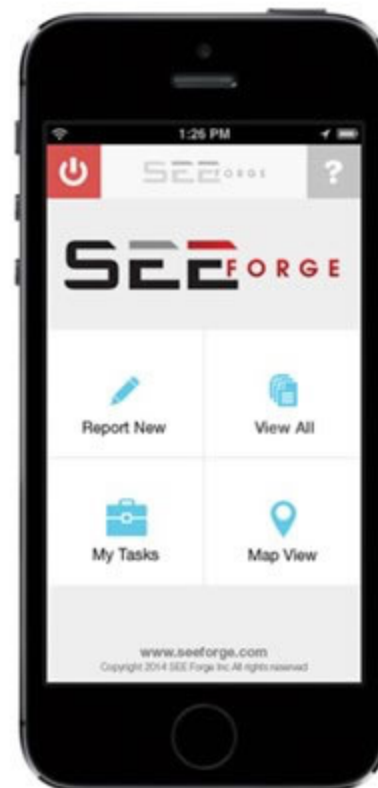

Decisions aren't data driven

The mixture of applications result in data silos, redundancy and data compromise

All your field processes on one **FAT FINGER™** solution

Our clients'
paperwork.
Painful.

into one easy place.

The Serious Business Impact

- Asset Management
- Field Inspections, Assessments and Monitoring
- Supply Chain Collaboration and Management
- Workforce Management
- Fleet Management
- Environmental, Health and Safety Compliance

Business Benefits

Business Value

Financial Impact

Empowers teams to solve their own problems.

Improved technology adoption results in cycle time reduction, performance, quality and safety improvements.

\$500K - \$12MM+

Improves data integrity, eliminates redundancy and improves data flow between field and office.

Streamlined information flow means data is analyzed and acted upon when and where it's needed, reducing downtime and increasing productivity.

\$8.2MM to \$100MM

Improves worker conformance to environmental health and safety (EHS) procedures - ensuring that steps aren't skipped, overlooked and are auditable.

Immediate, proactive response to potential EHS issues results in incident reductions.

\$100k - \$4 Billion+

Improves supply chain collaboration and performance.

Real time information from the field insures that material and equipment are available in the right quantity when and where they're needed.

10 - 35% improvement

Breaks down IT bottlenecks, reduces work loads, provides security and integration to existing systems.

Improves speed to business value.

\$200 - \$500K/yr

From the field to dashboard

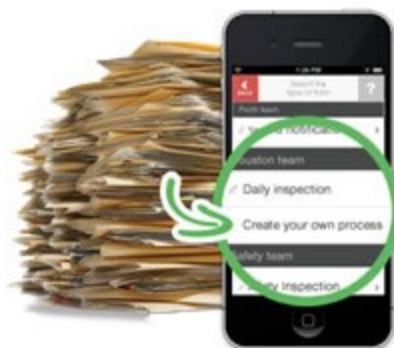

Across any process, on any device, at any time

SEE Forge empowers organizations to create FAT FINGER™ apps in a simple drag and drop way, to instantly automate key processes, integrate with existing systems and rapidly deploy across the enterprise.

Automate data collection, workflows & visualization of information

Across any process, on any device, at any time.

Anyone can
rapidly build &
improve
processes

FAT FINGER™ app
flexible to any
process

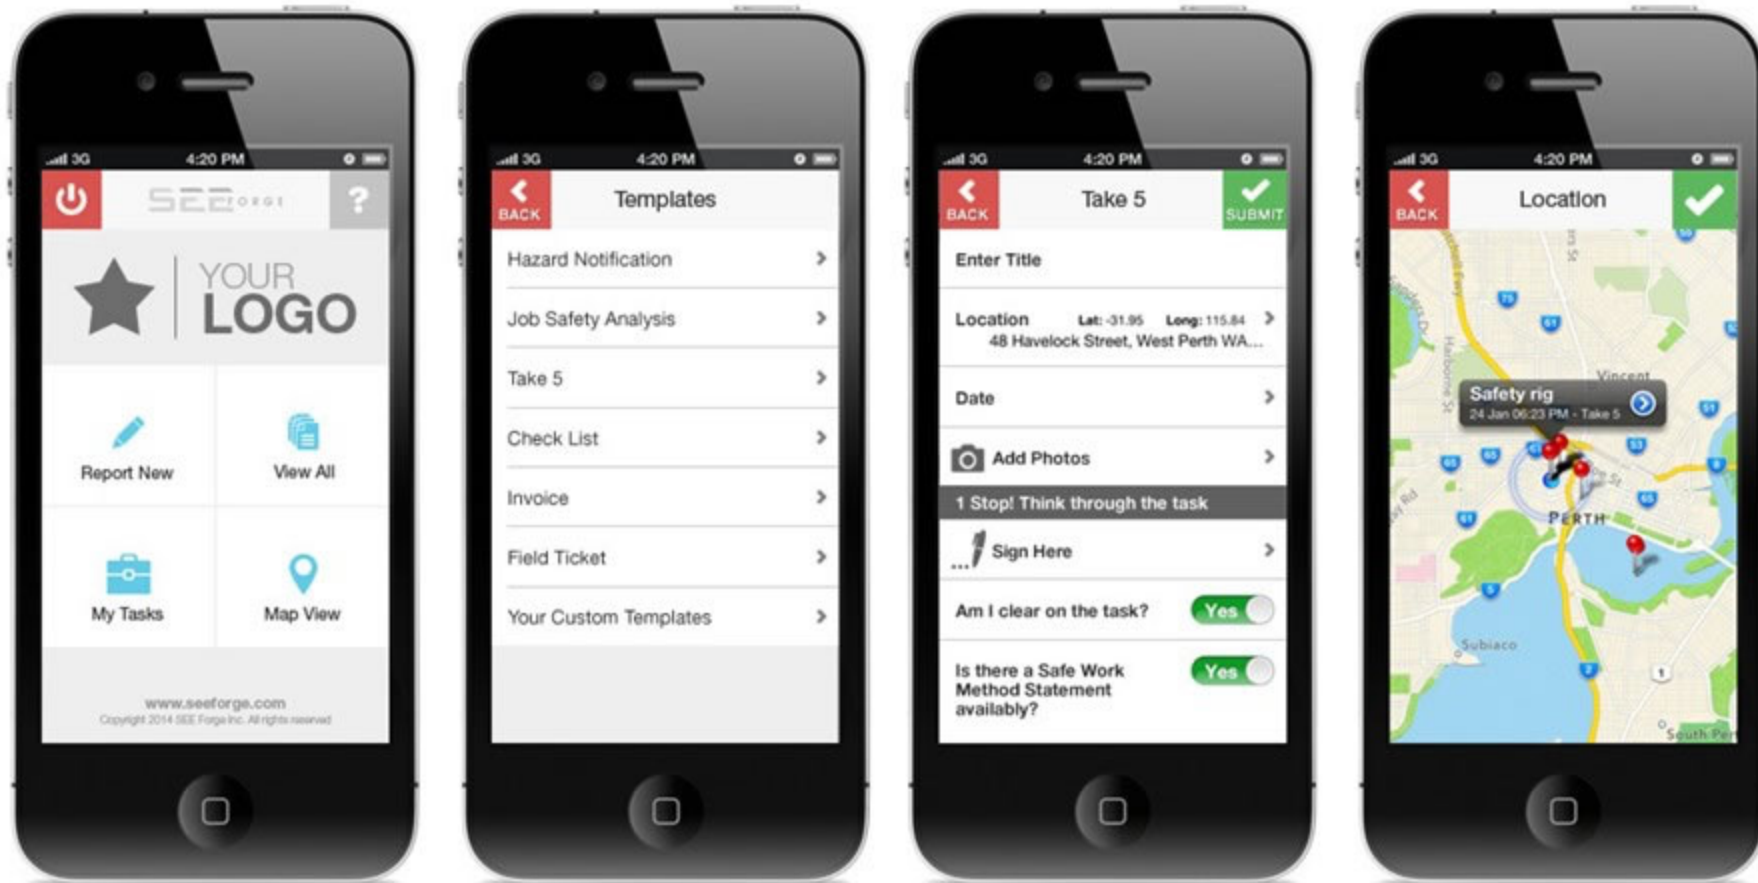

Real-time
operational
insights

Integration into
legacy systems
providing the user
with one app for all
processes

FatFinger™ easy app for the technology challenged

"It is remarkably easy to use!"

- Aurecon construction engineer.

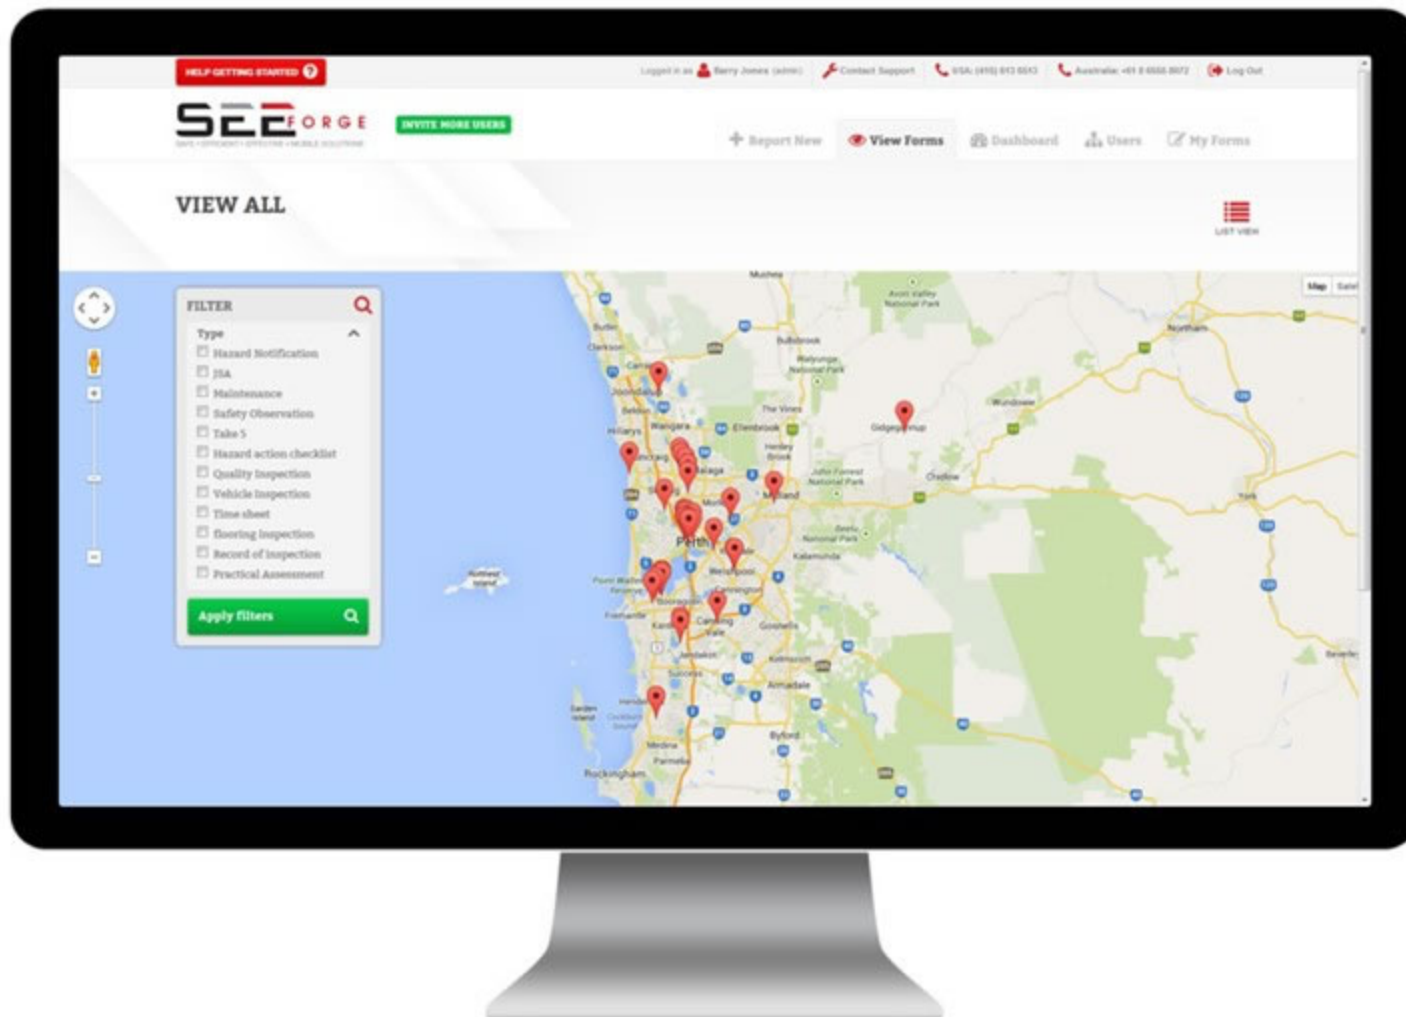

Early warning system to what is going on in the field

Cloud based Command Center – Stay on top of what matters most

GPS reporting to identify risk and optimization opportunities

Cloud based Command Center: Real time reporting plotted on map using GPS location.

Integrate current systems to provide perfect real-time data

Common frontend for all complex systems

Users don't need to worry that backend systems are changing

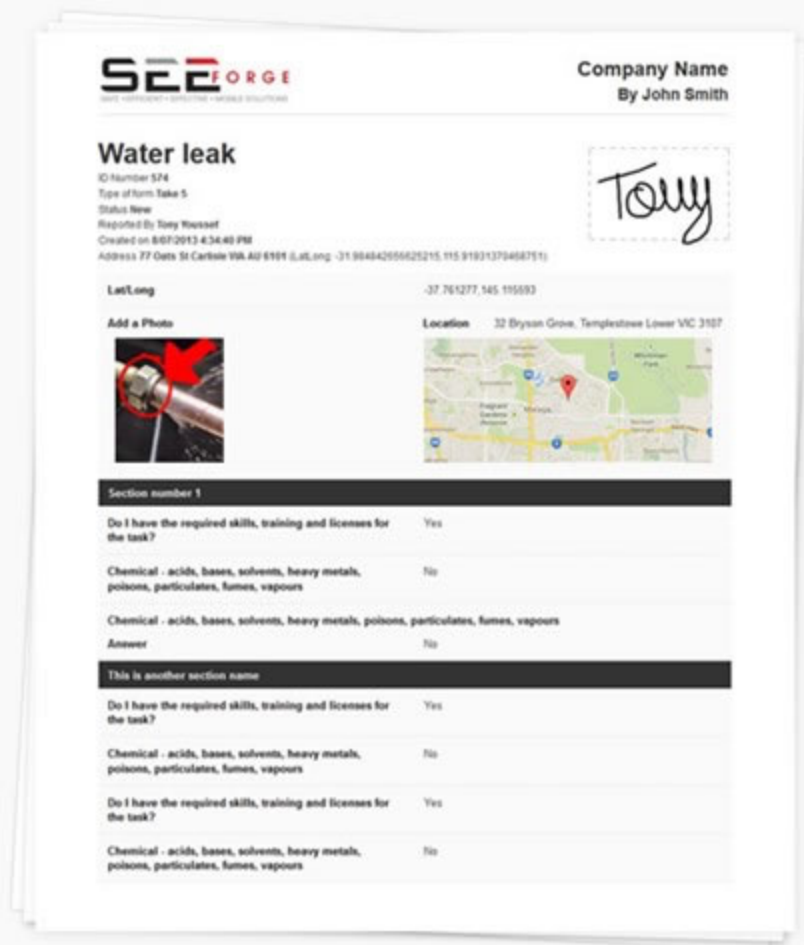

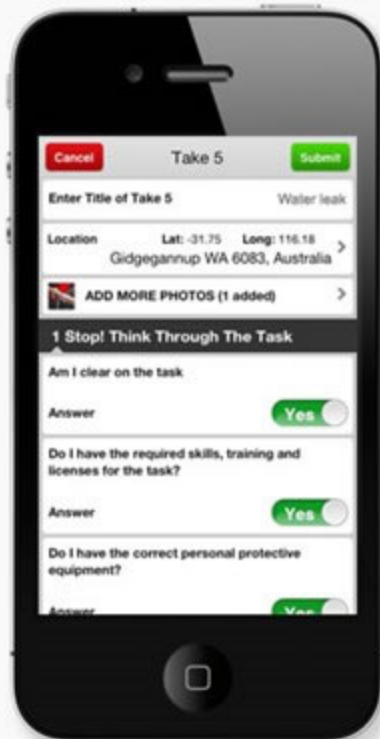

Plug in your current systems

Pass data to where it needs to go

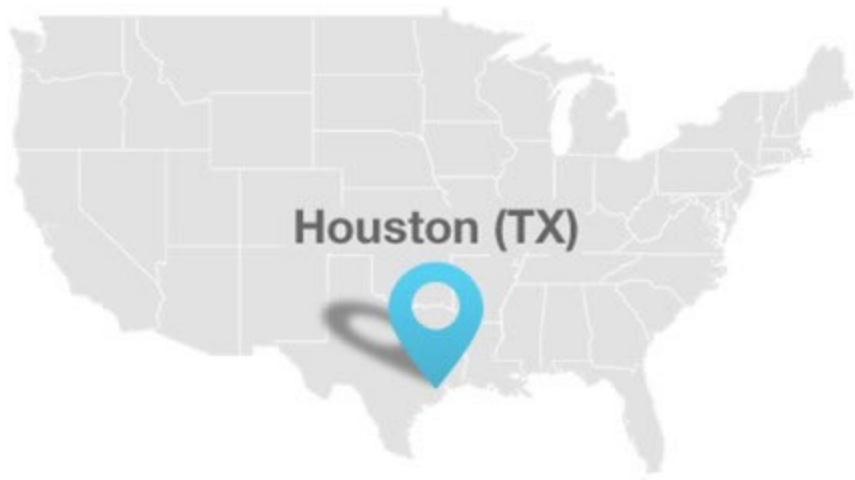

Export professional documents to your clients & partners

Send professionally formatted PDFs from the field.
